24/7 EMERGENCY SERVICES

24 Hour | 7 Days Emergency Services 800.262.0999

DownStream Services, Inc. provides emergency services for sanitary sewer and stormdrain systems 24 hours a day, seven days a week. In the event an emergency occurs after normal business hours, our emergency dispatch service at 1.800.262.0999 will direct your call immediately to an "on-call" team member. With the ability to mobilize vehicles and equipment within two hours of notification, DownStream Services, Inc. specializes in the following services:

- Confined Space and SCBA Entries
- Hydrdo-vac Cleaning and Containment
- Real-time CCTV Inspections
- Emergency Bypass Pumping
- Assessment, Replacement, and Repair of Wet Utilities

As a precautionary measure, DownStream Services, Inc. maintains a standard Sanitary Sewer Overflow (SSO) operating procedure which serves as a guideline to assist and mitigate spill containment. DownStream Services, Inc. is currently listed as a "Special Emergency Response Team" with several agencies, including the Department of the Navy and California Department of Transportation.

DOWNSTREAM SERVICES, INC. ASSISTS DEPARTMENT OF HOMELAND SECURITY WITH EMERGENCY RESCUE

San Ysidro, CA March 14th 2009 — DownStream Services, Inc.'s (DSI) Emergency Response Team assisted US Customs and Border Protection officials in locating suspected illegal immigrants trapped in a 24-inch Stormdrain below the Port of Entry at San Ysidro early on Sunday morning.

DSI was contacted on Saturday, March 14th 2009, by Special Agent Nathan Emery, with the Immigration & Customs Enforcement (ICE), to perform emergency CCTV inspections of stormdrains after a tip was received from a passing motorist observing people entering a stormdrain directly in front of the inspection booths at the border crossing.

DSI responded to the emergency by deploying one fully equipped CCTV inspection van, one welding truck, and (2) support vehicles, complete with Confined Space and Personal Protective Equipment (PPE). Once the team was debriefed, the first of several inspections began at 2:00 PM.

DSI entered the first stormdrain in Lane #16, located in the middle of afternoon traffic. The stormdrain grate was removed and a televised inspection was conducted of approximately 115-feet without signs of entry.

Under the direction of Agent Henning, DSI proceeded to Lane #24 and removed the welded grate of the second stormdrain in question. DSI's RST's robotic tractor camera was inserted into the vault and after televising approximately 225-feet of the 30-inch stormdrain, the camera became lodged in the pipe. While performing a Confined Space Entry to dislodge the camera, DSI's assistant technician witnessed the presence of individuals in the pipe. The camera remained in the pipe to monitor activity until US Customs and Border Protection officials removed the entrants.

Eight individuals emerged from the 30-inch stormdrain pipe with no injuries. Per the request of Agent Henning, DSI re-welded six stormdrain grate covers prior to leaving the site at 2:00 AM Sunday morning. DSI submitted a detailed report to the Department of Homeland Security, complete with DVD inspection footage and digital photographs.
